Punguaresistant transgenic plante - containing genes encoding intracellular enfittance and beta-1,3-glucanase Example 5, Fig 3, 45pp; English. This DNS sequence encodes an extractedilular beta-1,3-glucanase which is used to construct a transgenic plant in a novel method to produce plants resistant to fungal attock. Such transgenic plants expressing an intracellular plant the their all-3-glucanase gene with its tissues are predicted to exhibit improved resistance to

plants with improved resistance to pathogenic fund; - contains over-expression targetted to applants over-expression targetted to applants over-expression targetted to applants. This sequence was tooleted from an itabasem class library following secently with a partial tobacco beta, 1,3 glucanae close. The gene is deduced to encode an amain acid sequence adventual to that of the tobacco extraocallular beta, 1,3 glucanaes plans, from unclockid sequence can be inserted into an appropriate plans for production of transgenic plants having resistance to timps! pathogens

These, and fragentie, are selectively expressed in pre-3 cells. They can be used to prepare a probe for the determination of the stage of differentiation of S cells. The probe can also determine if a given leukachia is of the non-7 acute lymphoblastic type. Any of the Jesquences can be used to prepare an indicate and proper any of the Jesquences can be used to prepare any of the Jesquences can be used to prepare any of the Jesquences can be used to prepare any of the Jesquences can be used to prepare any of the Jesquences can be used to prepare any of the Jesquences can be used to prepare any of the Jesquences can be used to prepare any of the Jesquences can be used to be used to prepare any of the Jesquences can be used to be used t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              We passed to the control of the cont Page 343

CC The sequence was obtd. from the longest of the alpha 1 gp. of
CV-PA clones isolated from a CDNA Library preed, from RNA from
CC the salivary Janda of vampire bats. The V-PA protein produced
Cn nexpession of the gene is a high molecular form consisting oil
CC a finger domain, an EGP domain, a Kringel domain and a processe
Cd domain. It is fibrin specific and dissolves blood clots.
CC See aslac 005674-005676.

Chis chis chis sequence includes a claimed conding region for human cocculuit (see 194659), an integral transmembrane process for coming intercebiliar seals. The sequence was obtained from the seals of the sequence that showed homology to chitaken unity as process a last record that the seals of the s
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Dissophila filizied gene 2 (Df2) encoding a Whr receptor.

Why treceptor: Drosophila filizied gene 2 1022 gene;

Wing least receptor; My receptor; Adgmal framaduction; cancer;

that exhibits activity against a broad range of intestinal and opportunistic pethodens. Ret cryptdin-2, -2, and -3 genes (see Baco 1905) and 190738) were isolated from a Spraque-Daviey genomic labrary chored in EDBL3. The cryptdin-2 gene, or corresponding CDNA (see also 730734), can be used to produce large amounts of cryptdin-2 for use in treating inflammatory sequence 2408 BP; 640 A; 531 C; 557 G; 680 T;

This at the nucleotide expense of the gene for murine fixt X3, an entire fixt the nucleotide expense of the variant contains a replacement of the bases in the TRX Tay gene (099030). The variant contains a replacement of the bases in the tyrasine Kinase region, at postion 1801-75. This replaces the amino acids 601-614 of TRX IR protein sequence (R87023) in the tay amino acids 601-614 of TRX IR protein sequence (R87021) in the tay amino acids 601-615 shown there. The quality of the Manito Contains a signal brain the TRX fames extrity. The protein sequence (R87021) suffice response with typesine kinese explained a typesine of the signal and the signal brain of the tay of the signal and the transformed of the signal brain of the signal and the signal sequence (1872) shown the contained the signal and M82 The signal bail of the signal sequence of the signal sequence of the protein sa compared to their contained the transformed sequences in the protein as compared to their contained forms.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Location/Qualifiers

 ```

the 65kd polypoptide fragments and a 70kd polypoptide, diagnostic respent for Chapas' disease can be made: 65kd polypoptide and 70kd polypoptide are recognised by all of the Chapasic sera tested, but not by Letshmania.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Tue Nov 17 08:55:26 1998

This cDNA was isolated using probes designed using frequence of the ploy automated served exequence designed to the problem of the returning and functionally smaller to the gas protein of the returning and selectionally smaller to the gas protein of the returning and selectional parties to ploy binds with and obtained the ploy pocket. The ploy both of the ploy procket can perform a T-ploy binding function and a Elahypio account their respective 'pockets' but wery little homology outside this respective 'pockets' but wery little homology outside the sequence 2808 Bp. 931 M; 346 C; 577 G; 764 T; 764 T; 277 G; 112.

The sequence can be lighted to DNA encoding a soi. Inhaulin receptor (see 01401) to prepare a hybrid process. This new receptor (see 01401) to prepare a hybrid process. This new receptor is new in from the constant of the light and for localish per light by also useful for establishing the 3-p arouterent the lighted binding its and for designing analogues see also GATA and CATA and CAT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match 1.3%; Score 14; DB 3; Length 2916; Bert Local Similarity 100, Pred. Diagnosis of hereditary retinal degenerative diseases e.g. retinitis
pidagnosis of hereditary retinal degenerative diseases e.g. retinitis
pidagnosa, - caused by a human photocreceptor protein mutation, by
detection of the mutation by PCR amplification or hybridisation

Proceedings of the column 19-24; 71pp; English.

Confirm sequence encodes human prodogulo, and is aborn without this sequence encodes human prodogulo, and is aborn in 71716.

Substitution of Aintidiance, with introns, is shown in 717116.

Substitution of Aintidiance, with introns, is shown in 717116.

Substitution of Aintidiance, with Aintidiance and Could and Council on English and Council on English and Council on English and Council on English and English

Winclast translocation protein which binds to protein involved in circadian rhythms. used to develop prods. for disposits, prevention of disorders associated with circadian rhythms, e.g. treatment of disorders associated with circadian rhythms, e.g. treatment of disorders associated with circadian rhythms, e.g. treatment of the propersor.

William is adjusted to the invention of the invention by the a nuclear translocation contained to the invention by the invention where it is a nuclear translocation to protein the invention where it is a nuclear translocation to protein the contained to the circadian factors of the invention where it is the process of the circadian rhythm entrainment to environmental cycles of light Tip has circadian rhythm entrainment to environmental cycles of light Tip has containing the PAS demain, and is a protein involved in circadian factors containing the PAS demain, and is a protein involved in circadian rhythm. The ATPs of the invention, their fragments of that a circadian rhythm such as protein is also phosphorylated with a circadian rhythm and antisoniate are useful for preventing and/or receiving disorders of a circadian rhythm and antisoniate are useful for preventing and/or measuring conditions as as to classify groups of individuals with the disorders.

PA CILCHARACE RESPONDER THE MAINTENANCE OF CILCHARACE PARTY.

PA CILCHARACE RESPONDER - used to acreen for functional ligands and tidentify and isolate further receptors of the factories. Fig. 11 109pp. Findlish.

PA CILCHAR CONN was isolated from adult rat forebrain CDNN using a collish conn. Wetcher acceptors and protocol and a radiolabelled fragment of the CC Treeprox Mynchich and Protocol and a radiolabelled fragment of the CC Treeprox Wetcher a substance is a functional ligand for the CC receptor by monitoring ion channel activity.

Committee properties could be derived from human hoste marrow.

Contain bone marrow and liver, cord blood and defirst perights period. The ambeet of cerla recoperated by AG131 is of 1344 for the blood. The ambeet of cerla recoperated by AG131 is of 1344 for the cerla concepts colored contains substantially all of the granulcorperomocyte colored contains an example. The substantial contains heart to the substantial makes it useful as a respect for isolating and characterisating human heart topoletic properitor and etem cells, which can be used e.g. as gene therapy vehicles or for bone marrow reconstitution. Exploiting AG131 as a marker ensures a high purity popular contains the right of the properties and properties are presented to identify related door requirement of the properties and properties of the proper

The gene encoding the equine Citranian anidating enzyme has been conducting the equine Citranian anidating races actived from sequences encoding the rat enzyme. The Citranian anidating enzyme can be used to amidate physiologically active peptides such as calcitonia and gastrin. Cit takes anidates Dryr-Trpolly, Phe-Giy-Phe-Giy and Gly-Phe-Giy.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               signal_peptide CC ATON clone (T1312) codes for human insulin-like growth factor a receptor (GT HI) (18122). TGT HE plays a curedial role in a resolut smooth muscle cell (1924) politicative responses. Rat CC and the CT ATON (T1312) has profited the base for an attense senses. Rat CC and 1312 (T1312) has profited the base for an attense senses. Rat CC and 1312 (T1312) has profited the base for an attense senses and another to come for the control of the control 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         US-08-887-977-9.zng

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   sig_peptide CC The S. vedmorensis fosfomycin biosynthesis related gene 106001, encodes the methylation (HT) and epozylation (EP) engages R85167 and CR R85168, respectively. By cloning and integrating clusters of the HT can appete proper and an encoderate and properties of the HT can appete properties of the HT can appete properties of the HT can appete properties of PRSS1 (PERM P-14343). The prepare the S. lividans variant CC feaformycin by culture in a nutrient medium by conventional methods. Sequence 5169 BP. 8904, 1753 T. 1773 G. 7754 F.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Tribus ALL Statements PI protein and gene - used for studying proplement infection and for producing diagnostic reagents and proplement infection and for producing diagnostic reagents and statements are recorded to the statements are indicated as described in the lift-general in the features are indicated as described in the contification one fragment (*204-31) is not featured as it is no celly comprised in this sequence. The fragments are capable of profit as in the second in the sequence of a recombinant insert of planed pays IN (APC 67560 pending) and are suitable for the study of the role of organizations. The profit is precised in particular second for the study of the role of organizations.
                                                                                                                                                                                                                                                                                         Ouery Match 1.3%; Score 14; DB 18; Length 5169; Best Local Similarity 100.08; Fred. Claim 13; Fig 11; 131pp; English.

This sequence represents the coding sequence for the brosophila minogaster 'timeleas' (TRN) protein. This sequence also encodes the TYM splice variant. This is a moulear transforation protein. Properly of the minogaster Timeleas' (TRN) protein. The splice variant. This is a moulear transcription percent of protein involved in circadian hypidus, and of orginic transcription percent. The state of the invention have specific binding scriptive and pass a stabilish of the process of circadian rhypidus protein. The FFF also has the shilly to aid the process of circadian rhypidus settlement to entiremental crack (and in the process of circadian rhypidus which has the interpretable process of the process of circadian rhypidus process and the process of circadian rhypidus and the process is an opposphosylated with a circadian rhythm and the process is an opposphosylated with a circadian rhythm and has process is an expension of the invention of the invention of displaces of circadian rhythm and has depressed on marcollass are useful for preventing and or circadian rhythm as a secondarion of the invention of the conditions as as as to classify groups of individuals with the disorders.

The resulting fragment was used as probe to obtain the complex DNA sequence (098189). The protein or bacteria producing the protein or be used to produce optic failto objects and resulting the protein can be used to produce optic failto objects and resulting a protein or protein the protein objects of the protein objects of the protein objects of the protein of the protein objects of the protein objects
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   REGULT 536

PERSONAL SERV

This repetitive element is used to sythesize DNR prizers which may be used for testing for infestation of plant tissue with L. particularly with respect to blackles infestation of functional particularly with respect to blackles infestation for functione especially rape (brassica napus). Infestation testing may be especially rape (brassica napus). Infestation testing may be especially in virial present in about 80 copies per haploid genome only in virial solates of L. meculans and is present on every chromosome.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT 544

10 20-
regenera (19474-44), and a second set which suplifies highly conserved sequences present in the catalytic demain of the c-kit subgroup of Para (19475-46). The PIX genes identified are described in 64971-57 and 841897-02.

SLE-51 is expressed in several magnarycorgic cenl lines, but not in ryphosid cell lines. The SAL-51 expression prod. exhibited a significant sequence monology with howon posterin typosic Kinases of the PIX/PIX family. The partial and fall-length SAL-51 seems exquences are given in 1555, and 1665 ir specticely.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match 1.3%; Score 14; DB 6; Length 6827; Dest Local Similarity 100:0%; Pred. detection of the mutation by PCR amplification or hybridisation methods

Page 549

US-08-887-977-9. zng

Tue Nov 17 08:55:26 1998

detection of the mutation by PCR amplification or hybridisation are badds as the motation by PCR amplification or hybridisation are badds as the badds are condea human inchoopin, and is shown in full with contrasponding sequence without introns is shown in contrasponding sequence without introns is shown in contrast in the sequence without introns is shown in contrast in the sequence without introns and incompair amino contrast in the sequence of the monant certainia of principles of the normal contrast of a sequence of all noise and certainia of principles of the contrasponding normal sequence. Princes 468 (17122) and 502 (17122) may be used along with principles 188 (17122) to amplify a cutain and normal sequence. Prepares 468 (17122) and 502 (17122) and 602 (171222) and 602 (17122

CIT. 12. Each subunit gene was closed from a mouse spleen CORN.

CILILLY, and has been placed under the transcriptional control of a separate cytomegalovirus (CRV) promoter. An SVO splitting of a pergent cytomegalovirus (CRV) promoter. An SVO splitting categories provided between each subunit gens and the promoter. The backbore of the plasmid is from political control of springly linduces at least factor the expression of III-12 as the backbore of the plasmid is from political control of the plasmid involves delivering copies sention vercor pRGN3186 (see VV2043) in vivo and in vitro. A background of trashible force, and in vitro. A promoter of copies sention of the promoter of pressible force, and an an anamalian of promoter operative in the commandiac of III-12 to carpete cells a sponsor of pressible for the control of the procession for trashible control of the procession of the control of the procession of the control of the procession of the procession of the control of the procession of the control of the procession o

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Alage in Alassacian visits of the Alassacian v
